Dosing for Ibuprofen

The proper dosage for your child is based on his or her body weight, not age. If you don't know how much your child weighs and he is too young to stand on a scale alone, weigh yourself and then weigh yourself holding him. Subtract your weight from the combined weight to get his current weight. Ibuprofen is dosed every 6 to 8 hours and no sooner. **REMEMBER TO ALWAYS USE THE DOSING CUP OR SYRINGE THAT COMES WITH THE MEDICATION AND NO OTHERS.**

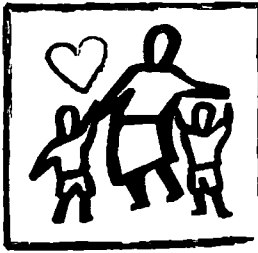

This is how they come: Infant drops 50mg per 1.25ml (syringe)
Children's liquid 100mg per 5ml (1 tsp) (dosing cup)
Children's chewables 100mg each

See weight chart with proper dosing below:

12-17 lbs:	Dose 50mg	Infant drops 2/3 of dropper (1.25ml) Children's liquid 1/2 tsp (2.5ml)
18-20 lbs	Dose 75mg	Infant drops Full dropper (1.875ml) Children's liquid 3/4 tsp (4ml)
21-29 lbs	Dose 100mg	Infant drops 1/2 dropperful (1.25) TWICE (2.5ml total) Children's liquid 1 tsp (5ml) Children's chewables 100mg , give 1
30-39 lbs	Dose 150mg	Infant drops 2 dropperfulls (1.875ml x 2) Children's liquid 1 1/2 tsp (7.5ml) Children's chewable 1 1/2 tablets

Ibuprofen Dosing Continued:

40-49lbs	Dose 200mg	Infant drops should be discontinued Children's liquid 2 tsp (10ml) Children's chewables 2 tablets Adult Ibuprofen tabs 1 tablet
50-59lbs	Dose 250mg	Children's liquid 2 1/2 tsp (12.5ml) Children's chewables 2 1/2 tablets Adult Ibuprofen tablets 1 1/2 tablets
